MAP 3.0
Setup Guide

50 AI employees · ₹0 salary · step by step

⚡ **Step 1** — n8n setup (Cloud ya apna server)

📥 **Step 2** — 50 workflows import karna

🔑 **Step 3** — Accounts connect karna (AI, Google, WhatsApp, Telegram)

🛠️ **Step 4** — Har workflow configure karna (01 → 50)

✅ **Step 5** — Test, live karna + problems ka hal

🎥 Poora step-by-step video isi hafte aa raha hai

Complete setup chahiye? Hum aapke business ke liye poora setup kar denge. 📅 Call book karo →

Pehle yeh samjho

Aapko mile hain **50 n8n workflows** (folder `MAP3_50_agents`): 7 departments × 7 agents + 1 CEO agent. Har workflow ek `.json` file hai jo n8n mein import hoti hai. Har workflow ke canvas pe ek **yellow sticky note** hai jismein usi workflow ke setup steps likhe hain. Wahi steps is guide ke Step 4 mein bhi hain.

> **Sabse aasaan raasta:** sab 50 ek saath mat lagao. Pehle **1 workflow** chalao (28 Daily Cash Report ya 22 Bill Reader), samjho, phir agla.

Aapko kya chahiye

- **n8n** — n8n Cloud account *ya* apna server (Docker). Step 1 dekho.
- **AI key** — Anthropic API key (default). OpenAI ya Gemini bhi chalega, bas model node badlo.
- **Google account** — Sheets, Gmail, Calendar, Drive, Docs (jo workflow use kare).
- **WhatsApp Business Cloud API** — WhatsApp wale agents ke liye (Meta developer account).
- **Telegram bot** (optional) — CEO agent aur News Digest ke liye.

Saare 50 ek nazar mein

#	Dept	Agent	Connect	Time

Complete setup chahiye? Hum aapke business ke liye poora setup kar denge. 📅 Call book karo →

Step 1 · n8n setup

3 options hain. Shuru karne ke liye **Option A** sabse aasaan hai. 24×7 sasta chalana hai to **Option B**.

Option A — n8n Cloud (5 min, koi server nahi)

1. n8n.io pe jao → **Get started** → email se account banao (free trial).
2. Apna workspace naam do. Aapka n8n link milega: `https://yourname.app.n8n.cloud`.
3. Bas. Google login yahan one-click hai, aur webhooks (WhatsApp, forms) apne aap public hote hain.

Option B — Apna server / VPS pe Docker (sasta, 24×7)

1. Koi bhi Linux VPS lo (2 GB RAM kaafi hai) aur Docker install karo.
2. Yeh command chalao:

```
docker volume create n8n_data
docker run -d --name n8n --restart unless-stopped -p 5678:5678 \
  -e GENERIC_TIMEZONE="Asia/Kolkata" -e TZ="Asia/Kolkata" \
  -e WEBHOOK_URL="https://n8n.yourdomain.com/" \
  -v n8n_data:/home/node/.n8n docker.n8n.io/n8nio/n8n
```

3. Domain ka sub-domain (e.g. `n8n.yourdomain.com`) server pe point karo aur HTTPS lagao (Caddy / Nginx + Let's Encrypt).
4. Browser mein kholo → owner account banao (email + password).

> **Zaroori:** WhatsApp trigger aur webhooks ko **public HTTPS link** chahiye. Isliye `WEBHOOK_URL` sahi set karo. Sirf laptop pe chala rahe ho to Cloudflare Tunnel (`cloudflared tunnel --url http://localhost:5678`) se test kar sakte ho.

Option C — Laptop pe jaldi try (sirf test)

```
npx n8n
```

Node.js chahiye. `http://localhost:5678` kholo. Laptop band = workflows band.

Timezone

Settings → **Timezone: Asia/Kolkata** rakho, warna 8 AM wale reports galat time pe aayenge.

Complete setup chahiye? Hum aapke business ke liye poora setup kar denge. 📅 Call book karo →

Step 2 · Workflows import karo

Ek workflow import (sab ke liye same)

1. n8n mein **Overview** → **Create Workflow** (ya **+**).
2. Upar right ⋯ menu → **Import from File…**
3. Folder `MAP3_50_agents` se file chuno, e.g. `28_finance_daily_cash_report.json`.
4. Canvas pe workflow aa jayega. **Save** dabao (Ctrl/Cmd + S).
5. Yellow sticky note padho. Wahi setup steps hain.

> **Tip:** File ko seedha n8n canvas pe **drag & drop** ya JSON copy karke canvas pe **paste** bhi kar sakte ho.

Saare 50 ek saath (Docker / self-host)

```
docker cp MAP3_50_agents n8n:/tmp/map3
docker exec -it n8n n8n import:workflow --separate --input=/tmp/map3
```

Sab workflows **inactive** import honge. Jo chahiye sirf use setup karke Active karo.

Import ke baad red ⚠ triangle?

Normal hai. Matlab us node ko abhi account (credential) chahiye. Step 3 mein lagao, triangle chala jayega.

Complete setup chahiye? Hum aapke business ke liye poora setup kar denge. 📅 Call book karo →

Step 3 · Accounts connect karo

Credentials ek baar banao, phir har workflow mein dropdown se chuno. n8n mein: **Overview** → **Credentials** → **Add credential**, ya kisi node ko kholo → **Credential** → **Create new**.

🧠 AI model (Anthropic)

1. console.anthropic.com → API Keys → **Create key**. Thoda credit add karo.
2. n8n → credential **Anthropic** → key paste → Save.
3. OpenAI/Gemini chahiye? Model node delete karke **OpenAI Chat Model** / **Google Gemini Chat Model** lagao aur same jagah connect karo.

📊 Google (Sheets, Gmail, Calendar, Drive, Docs)

- **n8n Cloud:** credential kholo → **Sign in with Google**. Done.
- **Self-host:** Google Cloud Console → naya project → APIs enable karo (Sheets, Gmail, Calendar, Drive, Docs) → **OAuth consent screen** (External, apna email test user) → **Credentials** → **OAuth client ID (Web)** → Redirect URL mein n8n ka diya hua link paste karo → Client ID + Secret n8n mein daalo → Sign in.

> **Ek hi Google Sheet** rakho, har list ka alag tab: Leads, Orders, Sales, Expenses, Tickets, Tasks, Stock, Payroll… CEO agent aur Weekly Summary inhi tabs ko padhte hain. Har workflow ka sticky note batata hai kaunsa tab aur kaunse headers.

💬 WhatsApp Business Cloud API

1. developers.facebook.com → **Create App** → type Business → **WhatsApp** add karo.
2. WhatsApp → **API Setup**: **Phone Number ID** aur **WhatsApp Business Account ID** copy karo. Apna number add karke verify karo.
3. Business Settings → System Users → **permanent access token** banao (whatsapp_business_messaging + management).
4. n8n → credential **WhatsApp API** (bhejne ke liye: token + Business Account ID) aur **WhatsApp OAuth** (trigger ke liye: App ID + App Secret).
5. Workflow mein `YOUR_PHONE_NUMBER_ID` replace karo.

> **2 rules yaad rakho:** (1) Ek Meta app = **ek webhook**. Kai WhatsApp-trigger agents (02, 11, 33, 34, 50…) chalane hain to ek "router" trigger banao ya alag app/number. (2) Customer ke last message ke 24 ghante baad sirf **approved template** bhej sakte ho (reminders, broadcasts).

✈️ Telegram (optional)

1. Telegram mein **@BotFather** → `/newbot` → token copy.
2. n8n → credential **Telegram API** → token paste. Apna chat ID **@userinfobot** se lo.

📄 Gotenberg (sirf 35 Payslip Sender)

```
docker run -d -p 3000:3000 gotenberg/gotenberg:8
```

`YOUR_GOTENBERG_URL` = `http://localhost:3000` (ya server ka address).

Placeholders

Files mein koi key nahi hai. Har `YOUR_...` (sheet link, Phone Number ID, owner number, email) apni value se replace karo. Numbers **91XXXXXXXXXX** format mein (country code, no + ya space). n8n mein **Ctrl/Cmd + F** se "YOUR_" search karo.

Complete setup chahiye? Hum aapke business ke liye poora setup kar denge. 📅 Call book karo →

Step 4 · Har workflow configure karo

Har card = ek workflow, wahi steps jo uske canvas ke sticky note pe hain. Step 3 ke credentials ready hain to har workflow 10–15 min ka kaam hai.

01 SALES Lead Finder

10 min

File: `01_sales_lead_finder.json` · Connect: AI model, Google Sheets

Every morning: search Google Maps for businesses → open each website → Claude writes a personal first line for your cold email → new row in Google Sheets.

Setup (10 min)

1. **Your search**: set the search (e.g. `dentist in Hyderabad`), how many results, and one line about what you sell.
2. **Google Maps search**: in Google Cloud enable *Places API (New)*, create a key and paste it in the empty `X-Goog-Api-Key` header (or use a Header Auth credential).
3. **Claude**: add your Anthropic API key credential.
4. **Save to Google Sheet**: connect Google Sheets, make a sheet with headers: Date, Business, Website, Rating, Reviews, Address, Maps link, Observation, First line, Fit score, then pick it.
5. Execute once, check the sheet, then Activate.

Nothing is emailed. You review the lines first.

02 SALES WhatsApp Replier

10 min

File: `02_sales_whatsapp_replier.json` · Connect: AI model, Google Sheets, WhatsApp API

New lead messages → Claude replies in 2 sec → lead saved to Google Sheet.

Setup (10 min)

1. WhatsApp Trigger + WhatsApp Send: add your **WhatsApp Business Cloud API** credential (Meta developer app).
2. WhatsApp Send: paste your **Phone Number ID**.
3. Claude: add your **Anthropic API key** credential.
4. Sheets: make a sheet with a tab `Leads` and columns `name, phone, need, budget, reply, time`. Paste its ID.
5. Edit the system prompt: your business name, services, prices.
6. Activate.

03 SALES Lead Qualifier

10 min

File: `03_sales_lead_qualifier.json` · Connect: Google Sheets, WhatsApp API

Your website form or ad POSTs a new lead → Claude qualifies it (hot = ready to buy) → every lead saved to Google Sheets → hot leads ping you on WhatsApp so you can call them first.

Setup (10 min)

1. **Webhook**: send `{ name, phone, email, source, message }` from your form / Zapier / Meta Lead Ads to the Production URL.
2. **Claude Qualify**: add your Anthropic API key credential.
3. **Save to Sheet**: tab `Leads` with columns Timestamp, Name, Phone, Email, Source, Message, Status, Reason. Paste the sheet ID.
4. **WhatsApp Owner Alert**: WhatsApp Business Cloud API credential, your Phone Number ID, and YOUR number as recipient.
5. Activate.

04 SALES Proposal Writer

15 min

File: `04_sales_proposal_writer.json` · Connect: AI model, Gmail, Google Docs, Google Sheets

Move a lead to Stage = **proposal** in your sheet → AI writes a proposal from YOUR price list → saved as a Google Doc → a Gmail **draft** to the lead is ready for you to check and send.

Setup (15 min)

1. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Leads**: Lead ID, Name, Company, Email, Phone, Need, Budget, Notes, Stage, Proposal doc, Updated.
2. **Your services & prices**: write your real services, ₹ prices and terms. The AI uses only these.
3. Google Docs: add a **Google Docs OAuth2** credential. Gmail nodes: add a **Gmail OAuth2** credential.
4. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

Nothing is sent automatically: you open the draft, read it, press Send.

05 SALES Follow-up Chaser

10 min

File: `05_sales_follow_up_chaser.json` · Connect: AI model, Google Sheets, WhatsApp API

Most sales are lost because nobody follows up. This agent sends a WhatsApp follow-up on **day 1, 3 and 7** after your last talk with a lead, written by AI from your notes (no fake urgency). If the lead replies with interest (price, visit, ready to buy) you get an alert to call them.

Setup (10 min)

1. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Leads**: Lead ID, Name, Phone, Interested in, Last contact (yyyy-mm-dd), Notes, Status (open / won / lost / stop), Followups.
2. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup). Replace YOUR_OWNER_WHATSAPP with the owner's WhatsApp number in 91XXXXXXXXX format.
3. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

Lead buys or says STOP → change Status, follow-ups stop.

06 SALES Repeat-Order Reminder

10 min

File: `06_sales_repeat_order_reminder.json` · Connect: AI model, Google Sheets, WhatsApp API

Regular dawai khatam hone se 3 din pehle WhatsApp → customer re-order / visit book karta hai. Customer bhi khush, business ka repeat bhi.

Setup (10 min)

1. Google Sheets: **Google Sheets OAuth2** credential, paste your sheet URL in place of YOUR_GOOGLE_SHEET_URL. Tab **Orders**: Name, Phone, Product, Start date, Days supply, Status (active).
2. WhatsApp nodes: **WhatsApp Business Cloud API** credential + your **Phone Number ID** (replace YOUR_PHONE_NUMBER_ID).
3. AI model: **Anthropic** credential (or swap the model node for OpenAI / Gemini).

Only for customers who agreed to WhatsApp reminders.

07 SALES Referral Asker

10 min

File: `07_sales_referral_asker.json` · Connect: AI model, Google Sheets, WhatsApp API

Two days after delivery it asks the customer for a 1-5 rating. **4-5** → Google review link + a referral ask ("send a friend's number"). **1-3** → no review request; the owner gets a private alert and the customer gets a sorry message. Referrals and other replies go straight to the owner.

Setup (10 min)

1. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Orders**: Delivered date (yyyy-mm-dd), Name, Phone, Product.
2. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup).
3. Replace YOUR_GOOGLE_REVIEW_LINK (Google Business Profile → Ask for reviews). Replace YOUR_OWNER_WHATSAPP with the owner's WhatsApp number in 91XXXXXXXXXX format.
4. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

08 SUPPORT AI Receptionist

15 min

File: `08_support_ai_receptionist.json` · Connect: AI model, Google Calendar, WhatsApp API

Customer WhatsApps → Claude checks your Google Calendar, books a free slot, confirms → sends a reminder 1 day before.

Setup (15 min)

1. WhatsApp Trigger + both WhatsApp nodes: **WhatsApp Business Cloud API** credential + your **Phone Number ID**.
2. Calendar tool + Book slot: **Google Calendar OAuth2** credential.
3. Claude: **Anthropic API key**.
4. Edit the system prompt: business name, hours, slot length, services.
5. Activate.

The reminder uses a Wait node, so keep n8n running (cloud or a server).

09 SUPPORT Missed-Call Rescuer

15 min

File: `09_support_missed_call_rescuer.json` · Connect: AI model, Google Sheets, WhatsApp API

Call miss → Claude writes a WhatsApp → sent in seconds → lead saved to Sheet.

Setup (15 min)

1. **Trigger:** your phone must POST `{ from, name, time }` to this webhook's Production URL on every missed call. Android: MacroDroid (trigger *Call Missed* → action *HTTP Request*). Business number: Exotel / Knowlarity missed-call webhook.

`from` = number with country code, digits only (e.g. 9198xxxxxxxx).

1. **WhatsApp text-back:** WhatsApp Business Cloud API credential + your Phone Number ID.
2. **Claude:** Anthropic API key. Edit the system prompt with your business.
3. **Log lead:** sheet tab `Leads` with columns `phone, name, time, status`. Paste its ID.
4. Activate.

10 SUPPORT Inbox Sorter

10 min

File: `10_support_inbox_sorter.json` · Connect: AI model, Gmail

Every new email → Claude reads it → needs a reply? Draft ready. Otherwise labelled FYI.

Setup (10 min)

1. Gmail nodes: add your **Gmail OAuth2** credential.
2. In Gmail create a label `AI/FYI`. In **Add Label**, pick it from the list.
3. Claude: add your **Anthropic API key**.
4. Edit the system prompt: who you are, how you write.
5. Activate. Drafts appear in Gmail → Drafts. Nothing is ever sent automatically.

11 SUPPORT FAQ Bot

10 min

File: `11_support_faq_bot.json` · Connect: AI model, Google Sheets, WhatsApp API

Fees kitni? ITR ke liye kya documents? Last date kab hai? WhatsApp pe turant jawab, sirf aapki FAQ sheet se. Notice / penalty / tax calculation → owner ko alert.

Setup (10 min)

1. WhatsApp nodes: **WhatsApp Business Cloud API** credential + your **Phone Number ID** (replace YOUR_PHONE_NUMBER_ID).
2. Google Sheets: **Google Sheets OAuth2** credential, paste your sheet URL in place of YOUR_GOOGLE_SHEET_URL. Tab **FAQ** with columns Question, Answer.
3. AI model: **Anthropic** credential (or swap the model node for OpenAI / Gemini).
4. Replace YOUR_OFFICE_WHATSAPP (country code, no +).

12 SUPPORT Complaint Summariser

15 min

File: `12_support_complaint_summariser.json` · Connect: AI model, Gmail, Google Sheets, WhatsApp API

Every complaint on WhatsApp or email becomes a **ticket row** with a one-line AI summary, category and priority. **High-priority or angry** complaints: the owner gets a WhatsApp alert and NO auto-reply goes out. Normal ones get a polite fixed acknowledgement (email = Gmail draft only).

Setup (15 min)

1. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup).
2. Gmail nodes: add a **Gmail OAuth2** credential. Edit the search words in **New email** if you like.
3. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Tickets**: Ticket ID, Received, Channel, Name, Contact, Category, Priority, Angry, Order ref, Summary, Message, Status, Subject, Thread.
4. Replace YOUR_OWNER_WHATSAPP with the owner's WhatsApp number in 91XXXXXXXXXX format.
5. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

The AI never writes replies to customers here, it only reads and sorts.

13 SUPPORT Queue Wait Alert

10 min

File: `13_support_queue_wait_alert.json` · Connect: Google Sheets, WhatsApp API

For any walk-in business with a queue (salon, clinic, service centre, bakery orders, repair counter). Staff press **Next customer** → the customer who is next and the one 2 away get a WhatsApp, so people wait outside or at home, not at your counter.

Setup (10 min)

1. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup).
2. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Tokens**: Date (yyyy-mm-dd), Token, Name, Phone, Service, Status. Add each walk-in with a token number.
3. The button: POST {"token": 12} to this webhook URL from a phone shortcut, tablet or an n8n form.

No AI needed here: fixed, polite messages.

14 SUPPORT Feedback Follow-up

10 min

File: `14_support_feedback_follow_up.json` · Connect: AI model, Google Sheets, WhatsApp API

Two days after a service or delivery it asks the customer "is everything working well?". Happy → AI thank-you. **Small issue, problem or angry** → the owner gets an alert and the customer gets a fixed message that the owner will call (the AI does not handle complaints).

Setup (10 min)

1. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup).
2. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Jobs**: Service date (yyyy-mm-dd), Name, Phone, Service.
3. Replace YOUR_OWNER_WHATSAPP with the owner's WhatsApp number in 91XXXXXXXXXX format.
4. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

15 MARKETING SEO Page Team

15 min

File: `15_marketing_seo_page_team.json` · Connect: AI model, WordPress

Every night at 2 AM: research competitors → compare with your site → pick a missing search → write a page → editor checks it (sends it back if it fails) → publish to WordPress.

Setup

1. Fill in **Your business** (name, service, city, towns, facts, sitemap URL).
2. **Find competitors**: add a *Header Auth* credential, name `X-Goog-Api-Key`, value = your Google Places API key.
3. Connect your Anthropic key in the 4 **Claude** nodes.
4. **Publish to WordPress**: connect WordPress (app password). It saves as **draft** first. Change status to *publish* once you trust it.
5. Execute once, check the draft, then Activate.

16 MARKETING 1 Video to 5 Posts

10 min

File: `16_marketing_1_video_to_5_posts.json` · Connect: AI model, Notion

Paste a YouTube link in the form → transcript → Claude writes an Insta caption, LinkedIn post, X thread, Shorts hook and newsletter blurb → all in one Notion page.

Setup (10 min)

1. Get transcript: any YouTube transcript API works. Example uses Supadata: add your key as env var `TRANSCRIPT_API_KEY` or swap the URL for your provider.
2. Claude: add your **Anthropic API key**.
3. Notion: add your **Notion** credential, create a database with a `Name` title property, share it with the integration, paste its ID.
4. Activate, open the form URL, paste a link.

17 MARKETING Review Replier

15 min

File: `17_marketing_review_replier.json` · Connect: AI model, Gmail

Every hour: fetch new Google reviews → Claude classifies each one and drafts an on-brand reply → happy reviews get the reply posted → angry ones are NOT posted; you get an email draft to handle them yourself.

Setup (15 min)

1. **Get new reviews** + **Post reply on Google**: Google Business Profile API access (OAuth2 credential with scope `business.manage`). Replace `YOUR_ACCOUNT_ID` and `YOUR_LOCATION_ID` in both URLs.
2. **Claude**: add your Anthropic API key credential. Edit the brand voice in *Claude reads review*.
3. **Draft alert to owner**: connect Gmail and put your email in *To*. It only creates a draft.
4. Execute once, check the replies, then Activate.

18 MARKETING Review Asker

10 min

File: `18_marketing_review_asker.json` · Connect: AI model, Google Sheets, WhatsApp API

Visit ke din raat ko rating poochta hai. 4-5 ⭐ → Google review link. 1-3 → review nahi maangta, owner ko private alert + sorry reply.

Setup (10 min)

1. WhatsApp nodes: **WhatsApp Business Cloud API** credential + your **Phone Number ID** (replace YOUR_PHONE_NUMBER_ID).
2. Google Sheets: **Google Sheets OAuth2** credential, paste your sheet URL in place of YOUR_GOOGLE_SHEET_URL. Tab **Visits** (same as 06).
3. Replace YOUR_GOOGLE_REVIEW_LINK (Google Business Profile → Ask for reviews) and YOUR_OWNER_WHATSAPP.
4. AI model: **Anthropic** credential (or swap the model node for OpenAI / Gemini).

19 MARKETING Comment Replier

25 min

File: `19_marketing_comment_replier.json` · Connect: AI model, Google Sheets, WhatsApp API

New comment on your Instagram or Facebook post → AI writes a short reply in your brand voice and posts it. **Complaints, spam, refund or angry comments are never answered by AI**: the owner gets a WhatsApp alert instead. Every comment is logged.

Setup (25 min)

1. Meta developer app → Webhooks: callback URL = this workflow's webhook URL, verify token = YOUR_VERIFY_TOKEN. Subscribe to Instagram **comments** and/or Page **feed**.
2. Replace YOUR_PAGE_ACCESS_TOKEN (Page token with instagram_manage_comments / pages_manage_engagement), YOUR_IG_ACCOUNT_ID and YOUR_PAGE_ID.
3. Edit the BRAND FACTS line in **AI writes reply**.
4. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup). Replace YOUR_OWNER_WHATSAPP with the owner's WhatsApp number in 91XXXXXXXXXX format.
5. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Comments**: Time, Platform, From, Comment, Type, Reply.
6. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

Activate the workflow so Meta can reach the webhook.

20 MARKETING Festival Offer Broadcaster

20 min

File: `20_marketing_festival_offer_broadcaster.json` · Connect: AI model, Gmail, Google Sheets, WhatsApp API

Three days before each festival in your sheet, AI turns **your own offer** into one festive line, emails it to you for **approval**, and only after you click Approve sends it as a WhatsApp template to customers who opted in.

Setup (20 min)

1. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Festivals**: Date (yyyy-mm-dd), Festival, Offer, Audience tag. Tab **Customers**: Name, Phone, Opt-in (yes/no), Tags. Tab **Broadcast log**.
2. WhatsApp: marketing messages need an **approved template**. In Meta → WhatsApp Manager create a Marketing template with 3 body variables, e.g. `Hello {{1}} ji, Happy {{2}}! {{3}} – YOUR BUSINESS NAME. Reply STOP to opt out.` Replace YOUR_TEMPLATE_NAME.
3. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup).
4. Gmail nodes: add a **Gmail OAuth2** credential. Replace YOUR_OWNER_EMAIL.
5. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

Only message people who said yes to offers. The AI cannot add discounts: it only rewrites your Offer text.

21 MARKETING Product Description Writer

10 min

File: `21_marketing_product_description_writer.json` · Connect: AI model, Google Sheets

Add a product row with a few notes → AI writes the **title, description, Instagram caption and hashtags** and writes them back into the same row (Status = ready for review). Good for Meesho, Amazon, your website or WhatsApp catalogue.

Setup (10 min)

1. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Products**: SKU, Product, Category, Price, Features, Status (new), Title, Description, Caption, Hashtags, Updated.
2. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

Check the text before you publish it.

22 FINANCE Bill Reader

10 min

File: `22_finance_bill_reader.json` · Connect: AI model, Gmail, Google Sheets

A bill arrives as a PDF → Claude pulls vendor, date, amount, GST → new row in your sheet.

Setup (10 min)

1. Gmail Trigger: add your **Gmail OAuth2** credential. Change the search if your bills come from specific senders.
2. Claude: add your **Anthropic API key**.
3. Sheets: tab `Bills` with columns `vendor, invoice_no, date, amount, gst, currency, file, received`. Paste the sheet ID.
4. Activate.

Note: works on text PDFs. Scanned photos of bills need an OCR step first.

23 FINANCE Invoice Chaser

10 min

File: `23_finance_invoice_chaser.json` · Connect: AI model, Gmail, Google Sheets

Every night at 9 PM: read your invoices sheet → find unpaid invoices past their due date → Claude writes a reminder whose tone matches how late it is (1-7 days friendly, 8-21 days firm, 22+ days final notice) → Gmail sends it → the sheet is updated so nobody gets two emails in one day.

Setup (10 min)

1. Google Sheet with headers: Invoice No, Client, Contact name, Email, Amount, Due date, Status, Reminders sent, Last reminder. Due date as YYYY-MM-DD. Status = Paid stops the reminders.
2. **Read invoices** + **Update sheet**: connect Google Sheets and pick that sheet.
3. **Claude**: add your Anthropic API key. Put your business name in the prompt.
4. **Send reminder**: connect Gmail.
5. Test with your own email in the sheet first, then Activate.

24 FINANCE Bank Statement Reader

10 min

File: `24_finance_bank_statement_reader.json` · Connect: AI model, Google Sheets, WhatsApp API

Bank statement PDF upload karo → AI har transaction ki draft entry banata hai (ledger suggest karta hai) → sheet mein. Kam confidence wali entries CHECK mark. **Accountant check karta hai, tab hi Tally mein jaata hai.**

Setup (10 min)

1. Google Sheets: **Google Sheets OAuth2** credential, paste your sheet URL in place of YOUR_GOOGLE_SHEET_URL. Tab **Draft entries**.
2. AI model: **Anthropic** credential (or swap the model node for OpenAI / Gemini).
3. WhatsApp nodes: **WhatsApp Business Cloud API** credential + your **Phone Number ID** (replace YOUR_PHONE_NUMBER_ID). Replace YOUR_CA_WHATSAPP.

Long statements: split by month. Scanned PDFs need OCR first.

25 FINANCE Invoice to GST Register

10 min

File: `25_finance_invoice_to_gst_register.json` · Connect: AI model, Google Sheets, WhatsApp API

Purchase bill PDF → AI GSTIN, invoice no, taxable value, CGST/SGST/IGST nikaalta hai → GST register sheet. Code GSTIN format aur total check karta hai; gadbad ho to owner ko flag.

Setup (10 min)

1. Google Sheets: **Google Sheets OAuth2** credential, paste your sheet URL in place of YOUR_GOOGLE_SHEET_URL. Tab **GST purchases**.
2. AI model: **Anthropic** credential (or swap the model node for OpenAI / Gemini).
3. WhatsApp nodes: **WhatsApp Business Cloud API** credential + your **Phone Number ID** (replace YOUR_PHONE_NUMBER_ID). Replace YOUR_CA_WHATSAPP.

Always reconcile with GSTR-2B before claiming ITC.

26 💰 FINANCE Fee Reminder

⏱ 10 min

File: `26_finance_fee_reminder.json` · Connect: Google Sheets, WhatsApp API

For gyms, tuition classes, schools, subscriptions, rent or any monthly fee. **2 days before**, on the due date, and **7 and 15 days after**: a polite WhatsApp with a UPI pay link (amount already filled in). No awkward follow-up calls.

Setup (10 min)

1. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Dues**: Customer, Phone, For, Amount, Due date (yyyy-mm-dd), Status (unpaid/paid), Reminders.
2. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup).
3. Replace YOUR_UPI_ID and YOUR%20BUSINESS%20NAME in the **Reminder due?** code node.

Mark Status = paid when the money arrives. No AI: fixed, polite text.

27 💰 FINANCE Expense Categoriser

⏱ 15 min

File: `27_finance_expense_categoriser.json` · Connect: AI model, Google Sheets, Telegram, WhatsApp API

Snap a bill or receipt and send it to your Telegram bot or business WhatsApp → AI reads vendor, amount, GST and picks a category → new row in your **Expenses** sheet → you get a ✅ reply. Unclear photos are marked CHECK.

Setup (15 min)

1. Telegram nodes: add a **Telegram API** credential (bot token from @BotFather) and replace YOUR_TELEGRAM_CHAT_ID. (no chat ID needed here: it replies to the sender).
2. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup).
3. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Expenses**: Added, Date, Vendor, Amount, GST, Category, Mode, Confidence, Status, Sent by, Note.
4. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini). (the model must support images; Claude does).

Use only one of the two triggers if you like: just delete the other one.

28 FINANCE Daily Cash Report

10 min

File: `28_finance_daily_cash_report.json` · Connect: AI model, Google Sheets, WhatsApp API

Every night at 9 PM it adds up today's **Sales** and **Expenses** sheets (UPI / cash / card, spend by category) and AI sends the owner a 6-line WhatsApp report: sales, spends, net and how much cash should be in the drawer. Logged in **Daily cash**.

Setup (10 min)

1. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Sales**: Date (yyyy-mm-dd), Bill no, Customer, Amount, Mode. Tab **Expenses**: Date, Vendor, Amount, Category, Mode (agent 27 fills this). Tab **Daily cash**.
2. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup). Replace YOUR_OWNER_WHATSAPP with the owner's WhatsApp number in 91XXXXXXXXXX format.
3. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

The maths is done in code, the AI only writes the words.

29 HR Resume Screener

10 min

File: `29_hr_resume_screener.json` · Connect: AI model, Gmail, Google Sheets

A resume PDF lands in Gmail → text extracted → Claude scores it 0-10 against your job description → Shortlist / Reject row in Google Sheets.

Setup (10 min)

1. Connect Gmail, Anthropic (Claude) and Google Sheets credentials.
2. In **Claude scores resume**, edit the **job description** block.
3. Make a Google Sheet with headers: Date, Name, Email, Phone, Experience, Skills, Score, Status, Reason, Subject, and pick it in the last node.
4. Activate. Every resume PDF → score → Sheet.

Judges only skills and experience. A human makes the final call.

30 HR Interview Scheduler

10 min

File: `30_hr_interview_scheduler.json` · Connect: AI model, Gmail, Google Calendar, Google Sheets

Mark a candidate **shortlisted** in your sheet (agent 29 does this) → it finds a free 45-minute slot in your Google Calendar (weekdays, no clashes), books it with a Google Meet link, emails a friendly invite and marks the row **invited**.

Setup (10 min)

1. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Candidates**: Name, Email, Phone, Role, Status, Interview.
2. Google Calendar node: add a **Google Calendar OAuth2** credential.
3. Gmail nodes: add a **Gmail OAuth2** credential.
4. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

Edit TIMES in **Pick free slots** for your interview hours.

31 HR Offer Letter Writer

10 min

File: `31_hr_offer_letter_writer.json` · Connect: AI model, Gmail, Google Docs, Google Sheets

Fill a 1-minute form (name, role, salary, joining date) → AI writes a clean offer letter as a **Google Doc** → a Gmail **draft** to the candidate with the link → logged in **Offers**. You check and send.

Setup (10 min)

1. Google Docs nodes: add a **Google Docs OAuth2** credential (the doc is created in your Drive root).
2. Gmail nodes: add a **Gmail OAuth2** credential.
3. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Offers**: Date, Name, Email, Role, Salary, Joining, Doc, Status.
4. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).
5. Replace YOUR BUSINESS ADDRESS in the prompt.

Open the form from the trigger's Production URL. Get legal terms checked once by your CA / lawyer.

32 HR Onboarding Buddy

10 min

File: `32_hr_onboarding_buddy.json` · Connect: AI model, Google Sheets, WhatsApp API

New staff joins → on **day 1, day 3 and day 7** they get a friendly WhatsApp with that day's checklist, and their manager gets a reminder. No new joiner feels lost.

Setup (10 min)

1. Edit the 3 checklists in **Your checklists**.
2. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Joiners**: Name, Phone, Role, Joining date (yyyy-mm-dd), Manager, Manager phone, Status (onboarding), Last sent.
3. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup). Replace YOUR_OWNER_WHATSAPP with the owner's WhatsApp number in 91XXXXXXXXX format. (used when Manager phone is empty)
4. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

The first message to a new number must be a template or they must message you first (WhatsApp 24-hour rule).

33 HR Leave Bot

15 min

File: `33_hr_leave_bot.json` · Connect: AI model, Google Sheets, WhatsApp API

Staff WhatsApp "sick leave tomorrow" → AI reads the dates and type → row in the **Leave** sheet → manager gets **Approve / Decline** buttons on WhatsApp → the employee is told the answer and the sheet is updated. Unknown numbers are ignored.

Setup (15 min)

1. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Staff**: Name, Phone (91XXXXXXXXXX), Manager phone. Tab **Leave**: Leave ID, Requested, Name, Phone, Manager, From, To, Days, Type, Reason, Status.
2. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup). Replace YOUR_OWNER_WHATSAPP with the owner's WhatsApp number in 91XXXXXXXXXX format. (fallback approver)
3. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

The workflow waits for the manager's tap, so keep it active.

34 HR Employee Doc Collector

15 min

File: `34_hr_employee_doc_collector.json` · Connect: AI model, Google Drive, Google Sheets, WhatsApp API

New staff send Aadhaar, PAN, photo, bank passbook on WhatsApp → AI tags which document it is → saved in your Drive as **Name_DocType** → the employee is told what is still pending. No more chasing papers.

Setup (15 min)

1. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup).
2. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Employees**: Name, Phone, Required, Received, Last doc, Pending.
3. Google Drive: add a **Google Drive OAuth2** credential and replace YOUR_DRIVE_EMPLOYEE_DOCS_FOLDER_URL. Keep this folder private: these are ID documents.
4. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

35 HR Payslip Sender

15 min

File: `35_hr_payslip_sender.json` · Connect: AI model, Gmail, Google Sheets, WhatsApp API, Gotenberg (PDF)

On the 1st of every month it reads last month's **Payroll** sheet, checks every row adds up (code + AI sanity check), then turns each payslip into a **PDF** and emails it to the employee. If anything looks wrong, **nothing is sent** and the owner gets a WhatsApp with the problems.

Setup (15 min)

1. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Payroll**: Key, Month (yyyy-mm), Name, Email, Basic, HRA, Allowances, Overtime, Deductions, PF, ESI, TDS, Net pay, Days worked, Sent.
2. PDF: run the free Gotenberg converter once (`docker run -d -p 3000:3000 gotenberg/gotenberg:8`) and replace YOUR_GOTENBERG_URL (e.g. http://localhost:3000).
3. Gmail nodes: add a **Gmail OAuth2** credential.
4. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup). Replace YOUR_OWNER_WHATSAPP with the owner's WhatsApp number in 91XXXXXXXXXX format.
5. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

The AI never changes numbers; it only checks them.

36 OPS No-Show Stopper

15 min

File: `36_ops_no_show_stopper.json` · Connect: AI model, Google Calendar, Google Sheets, WhatsApp API

Appointment se 1 din pehle + 2 ghante pehle WhatsApp reminder (1 = confirm, 2 = cancel). Cancel → slot free → waitlist ke pehle customer ko offer.

Setup (15 min)

1. WhatsApp nodes: **WhatsApp Business Cloud API** credential + your **Phone Number ID** (replace YOUR_PHONE_NUMBER_ID).
2. Google Calendar OAuth2 credential. Put `phone: 91XXXXXXXXXX` in each appointment's description.
3. Google Sheets: **Google Sheets OAuth2** credential, paste your sheet URL in place of YOUR_GOOGLE_SHEET_URL. Tab **Waitlist**: Name, Phone, Status.
4. AI model: **Anthropic** credential (or swap the model node for OpenAI / Gemini).

37 OPS Deadline Alert

10 min

File: `37_ops_deadline_alert.json` · Connect: Google Sheets, WhatsApp API

GST, ITR, TDS, advance tax: har client ko uski service ke hisaab se due date se 7, 3 aur 1 din pehle WhatsApp reminder. Koi deadline miss nahi.

Setup (10 min)

1. Google Sheets: **Google Sheets OAuth2** credential, paste your sheet URL in place of YOUR_GOOGLE_SHEET_URL.

Tab **Deadlines**: Filing, Due date, Applies to.

Tab **Clients**: Client, Phone, Services, Status.

Tab **Reminder log** (empty).

1. WhatsApp nodes: **WhatsApp Business Cloud API** credential + your **Phone Number ID** (replace YOUR_PHONE_NUMBER_ID).

Check the official due dates each month – extensions happen. Edit ALERT_DAYS in the code node.

38 OPS Document Chaser

10 min

File: `38_ops_document_chaser.json` · Connect: AI model, Google Sheets, WhatsApp API

Jo documents client ne abhi tak nahi bheje: din 2, 5 aur 9 pe follow-up (pehle pyaar se, phir firm). 12 din baad bhi nahi → owner ko "call kar lo" alert.

Setup (10 min)

1. Google Sheets: **Google Sheets OAuth2** credential, paste your sheet URL in place of YOUR_GOOGLE_SHEET_URL. Tab **Pending docs**: Client, Phone, Document, Asked on, Reminders, Status (pending/received).
2. WhatsApp nodes: **WhatsApp Business Cloud API** credential + your **Phone Number ID** (replace YOUR_PHONE_NUMBER_ID).
3. AI model: **Anthropic** credential (or swap the model node for OpenAI / Gemini).
4. Replace YOUR_CA_WHATSAPP. Workflow 01 can set Status = received automatically.

39 OPS Stock Alert

10 min

File: `39_ops_stock_alert.json` · Connect: AI model, Google Sheets, WhatsApp API

Every morning it checks your **Stock** sheet. Anything at or below its reorder level → one clear WhatsApp to the owner (out-of-stock first). Each item alerts once a day, not every hour.

Setup (10 min)

1. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Stock**: SKU, Item, In stock, Reorder level, Unit, Vendor, Last alert.
2. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup). Replace YOUR_OWNER_WHATSAPP with the owner's WhatsApp number in 91XXXXXXXXX format.
3. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

Keep **In stock** updated from your billing software or by hand.

40 OPS Vendor PO Sender

15 min

File: `40_ops_vendor_po_sender.json` · Connect: AI model, Gmail, Google Sheets, WhatsApp API

Every Monday it finds low-stock items, groups them **by supplier**, gives each a PO number, and AI writes one purchase order email per supplier as a **Gmail draft**. You get a WhatsApp summary, check the drafts and click send.

Setup (15 min)

1. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Stock**: SKU, Item, In stock, Reorder level, Order qty, Unit, Vendor, Last price. Tab **Vendors**: Vendor, Contact, Email, Phone. Tab **PO log**.
2. Gmail nodes: add a **Gmail OAuth2** credential.
3. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup). Replace YOUR_OWNER_WHATSAPP with the owner's WhatsApp number in 91XXXXXXXXX format.
4. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

41 OPS Delivery Status Updater

10 min

File: `41_ops_delivery_status_updater.json` · Connect: AI model, Google Sheets, WhatsApp API

Change an order's **Status** in your sheet (packed → shipped → out for delivery → delivered) and the customer gets a short WhatsApp update. **Delayed, cancelled or problem orders go to the owner first**: no awkward auto-messages.

Setup (10 min)

1. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Orders**: Order ID, Customer, Phone, Item, Status, Tracking, Note, Notified status.
2. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup). Replace YOUR_OWNER_WHATSAPP with the owner's WhatsApp number in 91XXXXXXXXX format.
3. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

Customers must have messaged you in the last 24 hours, or switch **Tell customer** to an approved template.

42 OPS Daily Task Assigner

10 min

File: `42_ops_daily_task_assigner.json` · Connect: AI model, Google Sheets, WhatsApp API

Write tomorrow's tasks in a sheet tonight. At 8 AM every staff member gets **their own** task list on WhatsApp (urgent ones first) and the owner gets a one-line summary.

Setup (10 min)

1. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Tasks**: Date (yyyy-mm-dd), Task, Assigned to, Priority, Where / notes. Tab **Staff**: Name, Phone.
2. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup). Replace YOUR_OWNER_WHATSAPP with the owner's WhatsApp number in 91XXXXXXXXXX format.
3. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

Staff should message your business number once so WhatsApp lets you reply (24-hour rule), or use a template.

43 RESEARCH Competitor Watcher

10 min

File: `43_research_competitor_watcher.json` · Connect: AI model, Google Sheets, WhatsApp API

Every Monday it opens each competitor's pricing / menu / offers page, compares it with last week's copy and, if something changed, AI tells you **what** changed in plain words (new price, new offer). One WhatsApp report; no message if nothing changed.

Setup (10 min)

1. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Competitors**: Name, URL, Last hash, Last text, Last checked, Last change. Fill Name + URL only.
2. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup). Replace YOUR_OWNER_WHATSAPP with the owner's WhatsApp number in 91XXXXXXXXXX format.
3. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

The first run only saves a snapshot. Pages that need a login or block bots will not work.

44 RESEARCH Price Tracker

10 min

File: `44_research_price_tracker.json` · Connect: Google Sheets, WhatsApp API

Track the price of anything online: your supplier's raw material, a competitor's product, a machine you want to buy. Every morning it reads the price, logs it, and WhatsApps you when it **drops** or goes below your target. No AI needed.

Setup (10 min)

1. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Track**: Product, URL, CSS selector, Last price, Lowest, Alert below. Tab **Price log**: Date, Product, Price.
2. CSS selector: right-click the price on the page → Inspect → copy its class, e.g. `.price` or `.a-price-whole`.
3. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup). Replace YOUR_OWNER_WHATSAPP with the owner's WhatsApp number in 91XXXXXXXXXX format.

Some big sites block automated visits; then the log says 'not found'. Follow each site's terms.

45 RESEARCH News Digest

10 min

File: `45_research_news_digest.json` · Connect: AI model, Telegram, WhatsApp API

Every morning: your industry's news from the last 24 hours → AI picks the **5 that matter to your business** and explains each in one line → sent on Telegram and WhatsApp. 2 minutes of reading instead of 30.

Setup (10 min)

1. In **Your feeds** replace YOUR+INDUSTRY and YOUR+CITY (use + for spaces) and describe your business in 'about'. Add any RSS feed, one per line.
2. Telegram nodes: add a **Telegram API** credential (bot token from @BotFather) and replace YOUR_TELEGRAM_CHAT_ID.
3. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup). Replace YOUR_OWNER_WHATSAPP with the owner's WhatsApp number in 91XXXXXXXXXX format.
4. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

Delete the Telegram or WhatsApp node if you only want one.

46 RESEARCH PDF Summariser

15 min

File: `46_research_pdf_summariser.json` · Connect: AI model, Gmail, Google Drive, Google Sheets, WhatsApp API

Any PDF that lands in Gmail or a Drive folder (invoice, quotation, GST notice, contract) → AI writes a **5-line summary** with the key ₹ numbers and dates and whether you must act → WhatsApp to the owner + a row in **PDF log**.

Setup (15 min)

1. Gmail nodes: add a **Gmail OAuth2** credential.
2. Google Drive nodes: add a **Google Drive OAuth2** credential and replace YOUR_DRIVE_INBOX_FOLDER_URL.
3. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **PDF log**: Received, Source, From, File, Kind, Action needed, Summary.
4. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup). Replace YOUR_OWNER_WHATSAPP with the owner's WhatsApp number in 91XXXXXXXXXX format.
5. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

Scanned PDFs (photos) have no text: use agent 22 (Bill Reader) for those. Delete one trigger if you only need one.

47 RESEARCH Lead Researcher

10 min

File: `47_research_lead_researcher.json` · Connect: AI model, Gmail, Google Sheets

Before a sales call, paste the company's website in a form → AI reads the site and emails you a **one-page brief**: what they do, who they sell to, size, likely needs, talking points, a ready opener and a fit score. Saved in **Lead research**.

Setup (10 min)

1. Gmail nodes: add a **Gmail OAuth2** credential. Replace YOUR_OWNER_EMAIL.
2. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Lead research**: Date, Company, Website, Fit score, What they do, Needs, Opener.
3. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

Open the form from the trigger's Production URL. Edit what you sell in the prompt.

48 RESEARCH Meeting Notes

10 min

File: `48_research_meeting_notes.json` · Connect: AI model, Gmail, Google Docs, Google Sheets

Paste a meeting transcript in a form → AI writes clean notes (summary, decisions, action items with owner + due date) into a **Google Doc**, adds every action to your **Actions** sheet, and drafts a follow-up email to the attendees.

Setup (10 min)

1. Google Docs nodes: add a **Google Docs OAuth2** credential.
2. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tab **Actions**: Meeting, Date, Task, Owner, Due, Status, Notes.
3. Gmail nodes: add a **Gmail OAuth2** credential.
4. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

Get transcripts from Google Meet (Gemini notes), Zoom, or any voice-to-text app. Always tell people when a meeting is recorded.

49 RESEARCH Weekly Business Summary

10 min

File: `49_research_weekly_summary.json` · Connect: AI model, Gmail, Google Sheets, WhatsApp API

Every Friday 6 PM it reads your **Leads, Sales, Expenses, Tickets and Tasks** sheets (filled by the other agents), works out the week's numbers in code, and AI writes a one-screen summary with 3 things to do next week. By email and WhatsApp.

Setup (10 min)

1. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Use the same sheet as your other agents. Each tab needs a Date (or Created / Received / Added) column; Sales and Expenses need Amount.
2. Gmail nodes: add a **Gmail OAuth2** credential. Replace YOUR_OWNER_EMAIL.
3. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup). Replace YOUR_OWNER_WHATSAPP with the owner's WhatsApp number in 91XXXXXXXXXX format.
4. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).

Missing a tab? Delete that node and reconnect the line.

50 👑 CEO CEO Agent

⏱ 30 min

File: `50_ceo_agent.json` · Connect: AI model, Google Sheets, Telegram, WhatsApp API

Your AI CEO. Message it on WhatsApp or Telegram ("aaj ka business kaisa hai?", "kaun leave pe hai?", "Diwali offer bhejo") → it decides which of your **7 teams** to call, runs those workflows, and replies with one short answer. It always asks you before anything is sent to customers. Every morning at 8 AM it also sends you yesterday's numbers.

Setup (30 min)

1. For each team you want, open a workflow of that department (e.g. 28 Daily Cash for Finance), add a **When Executed by Another Workflow** trigger with one input `request`, and make its last node return the answer as text. Copy that workflow's ID (from its URL) into the matching tool: YOUR_SALES_WORKFLOW_ID, YOUR_SUPPORT_WORKFLOW_ID, ... Delete tools you don't need.
2. AI model node: add an **Anthropic** credential (or swap the model node for OpenAI / Gemini).
3. WhatsApp nodes: add a **WhatsApp Business Cloud API** credential and replace YOUR_PHONE_NUMBER_ID with your Phone Number ID (Meta → WhatsApp → API setup). Replace YOUR_OWNER_WHATSAPP with the owner's WhatsApp number in 91XXXXXXXXXX format.
4. Telegram nodes: add a **Telegram API** credential (bot token from @BotFather) and replace YOUR_TELEGRAM_CHAT_ID.
5. Google Sheets nodes: add a **Google Sheets OAuth2** credential and paste your sheet link in place of YOUR_GOOGLE_SHEET_URL. Tabs: Leads, Sales, Expenses, Tickets, Tasks, Stock (same sheet as your other agents).

Only the owner's number / chat ID can talk to it. Use one WhatsApp trigger per Meta app (see README tips).

Complete setup chahiye? Hum aapke business ke liye poora setup kar denge. 📅 Call book karo →

Step 5 · Test karo, live karo

1. Saare messages pehle **apne number / apne email** pe point karo.
2. **Execute workflow** dabao. Har node pe ✓ green aana chahiye. Kisi node pe click karke output dekho.
3. Google Sheet / WhatsApp / Gmail draft mein result check karo.
4. Sab sahi? Upar right **Inactive** → **Active**. Ab schedule / trigger apne aap chalega.
5. **Executions** tab mein roz ek baar dekho, pehle hafte.

Problems ka hal

Problem	Kya karo
Red ⚠ on node	Credential missing. Node kholo → credential chuno.
Google "access blocked"	OAuth consent screen mein apna email **test user** add karo.
WhatsApp trigger kuch nahi karta	Workflow Active hai? n8n public HTTPS pe hai? Ek hi app pe doosra webhook to nahi?
WhatsApp error 131047	24 ghante ki window khatam. Approved template use karo.
Sheet node "column not found"	Tab ke headers sticky note jaise exactly likho (spelling + capital).
Galat time pe chal raha	Settings → Timezone Asia/Kolkata.
AI error 401 / 429	Key galat ya credit khatam. Console mein check karo.

> **Safety:** gusse wale customers, refunds aur discounts hamesha aapke paas aate hain. AI kabhi promise nahi karta. Jo bhi bahar jaata hai, pehle draft / approval se test karo.

> 📽️ **Poora step-by-step video isi hafte aa raha hai** — follow karo **@kaamchor_ai** taaki miss na ho.

DONE-FOR-YOU SETUP

Poora setup aapke liye kar dein?

n8n server, WhatsApp API, Google Sheets, AI keys aur aapke business ke hisaab se workflows: **hum sab set karke, test karke, live karke denge.**
